# ILS RECAP

## How ILS WORKS

Receiver

Instrument

# ILS DETAIL

## How ILS WORKS

# DME

## HOW IT WORKS

- AIRCRAFT SENDS A PULSE OUT ON FREQUENCY
- BASE STATION RECEIVES THE PULSE AND SENDS IT BACK
- AIRCRAFT RECEIVES PULSE AND CALCULATES THE ROUND TRIP TIME TAKEN AND THEREFORE DISTANCE TO RECEIVER
- NOTE IT IS MEASURING STRAIGHT LINE / SLANT DISTANCE TO THE BASE STATION

# DME

## EQUIPMENT

### AIRCRAFT RECEIVER BOX

**RMT** means DME frequency is paired to the NAV frequency selected. Often there is a NAV1 / NAV2 switch in the aircraft to select which NAV to pair to

**FREQ** means DME frequency is tuned directly on the box using the knob on the right (113.85 in this case)

**GS/T** changes the display to show Ground Speed and Time to Station

**Note: DME is separate from the LOC / ILS so needs identifying separately. Can take 30 secs between ident morse code beeps**

### AIRCRAFT AERIAL

### GROUND STATION

## Ex 19: ILS APPROACH – WIND CORRECTION

AIM: TO USE FLY AN INSTRUMENT LANDING SYSTEM APPROACH TO MINIMUMS

- T** OTHER AIRPLANES, INSTRUMENT NOT WORKING, GROUND STATION NOT WORKING
- E** MISREADING DISPLAY, INCORRECT FREQUENCY
- M** LOOKOUT (INSTRUCTOR), DOC, TUNE IDENT TURN STEER CHECK

- MAX DRIFT

$$\frac{\text{Windspeed} \times 60}{\text{TAS}} \quad \text{or at 90kt} = \text{Windspeed} \times \frac{2}{3}$$

- CLOCK CODE

# ILS WORKFLOW

EXAMPLE ARRIVAL, APPROACH AND MISSED APPROACH

# ILS WORKFLOW

## PRE-DEPARTURE

- GROUND BRIEF
  - REVIEW PROCEDURE PLATES / CHARTS
  - NOTE FREQUENCIES FOR COM AND NAV
  - CALCULATE MINIMA – FOR IR(R):
    - MDH: GREATER OF (SYSTEM MINIMA + 200 FT) OR 500FT AAL FOR A PRECISION APPROACH
    - RVR: >1500M
  - CHECK WINDS ALOFT
  - CALCULATE DRIFT FOR INBOUND LEG (WHEN ESTABLISHED ON THE LOCALIZER)
- PRE TAXI
  - SET UP INSTRUMENTS AND FREQUENCIES

# ILS WORKFLOW - 1

## 1 WELL BEFORE ARRIVING

- FRED A CHECKS
- ICE CHECK
- TUNE AND LISTEN TO ATIS (NOTE ARRIVAL RUNWAY, INFO LETTER E.G INFORMATION XRAY AND QNH)
- SELECT LIKELY APPROACH PLATE AND BRIEF ON PROC
- NAV1 SELECT, IDENT, OBS TO INBOUND CRS
- NAV2 SELECT, IDENT, OBS AS REQ
- DME SELECT, IDENT, DISPLAY
- ADF SELECT, IDENT, DISPLAY

## 2 FIRST CONTACT WITH APPROACH / RADAR

- "EAST MIDLANDS RADAR, G-RADI, PA28 INBOUND FROM THE NORTH FOR PRACTICE APPROACH WITH INFORMATION XRAY, QNH 1010"
- "G-RADI INFORMATION CORRECT, SQUAWK 4550"
- "SQUAWK 4550 G-RADI"
- "G-DI TRAFFIC SERVICE, FLY RADAR HEADING 090 DEGREES, EXPECT ILS 27 APPROACH"
- "HEADING 090 DEGREES, EXPECT ILS 27, TRAFFIC SERVICE G-DI"
- CHECK TOWER FREQUENCY NOW ON COM1 STANDBY

## 3 DOWNWIND

- PRE LANDING BUMPFICH CHECKS
- CHECK FOR ICE
- "G-DI REPORT READY TO COPY MISSED APPROACH INSTRUCTIONS"
- "READY TO COPY G-DI"
- "G-DI AFTER THE MISSED APPROACH, CLIMB STRAIGHT AHEAD TO 2500FT"
- "AFTER THE MISSED APPROACH CLIMB STRAIGHT AHEAD TO 2500FT G-DI"
- RE-BRIEF ON MINIMA AND MISSED APPROACH PROCEDURE

## 4 TURN ONTO BASE

- "G-DI TURN RIGHT HEADING 180 DEGREES BASE LEG"
- "HEADING 180 DEGREES G-DI"
- TURN TO HEADING 180

## 5 BASE

- "G-DI DESCEND ALTITUDE 2500FT QNH 1011"
- "DESCEND 2500FT QNH 1011 G-DI"
- DESCEND TO 2500FT

# ILS WORKFLOW - 2

## 6 TURNING ONTO APPROACH

- “G-DI TURN RIGHT HEADING 240 DEGREES, CLEARED FOR ILS 27 APPROACH, REPORT ESTABLISHED”
- “TURN RIGHT HEADING 240 DEGREES, CLEARED FOR ILS 27 APPROACH, WILCO G-DI”
- TURN RIGHT ONTO HEADING 240
- WATCHING FOR LOC NEEDLE COMING IN FROM THE LEFT
- AS THE NEEDLE MOVES TOWARDS CENTRE, GRADUALLY TURN ONTO HEADING 270° +/- WIND DRIFT. RATE OF TURN PROPORTIONAL TO SPEED OF MOVEMENT OF THE NEEDLE

## 7 LOCALIZER ESTABLISHED

- ONCE LOC NEEDLE IS CENTRED....
- “LOCALIZER ESTABLISHED G-DI”
- “G-DI CONTACT TOWER 124.005”
- CHANGE TO TOWER FREQ
- “EAST MIDLANDS TOWER G-RADI, LOCALIZER ESTABLISHED 7 DME”
- “G-DI EAST MIDLANDS TOWER, CONTINUE APPROACH”
- “CONTINUE APPROACH G-DI”

## 8 GLIDE SLOPE COMING IN

- WHEN GS NEEDLE IS 1 DOT ABOVE CENTRE:
  - FLAPS 1<sup>ST</sup> STAGE
  - RPM 1900
- WHEN NEEDLE CENTERED, PITCH SLIGHT NOSE DOWN (2-3°)
- LOOKING FOR 400-500 FPM (APPROX 5 X GROUND SPEED FOR 3° GLIDESLOPE)
- HEADING CHANGES +/- 10° MAXIMUM

## 9 CLOSING IN, SAY 3-4 NM

- “G-DI CLEARED FOR THE LOW APPROACH GO AROUND”
- “CLEARED FOR LOW APPROACH GO AROUND G-DI”
- HEADING CHANGES +/- 5° MAXIMUM (WITHIN THE HEADING BUG)
- CALLOUT TO YOURSELF “200FT TO GO....100FT TO GO”

# ILS WORKFLOW - 3

## 10 COMING UP TO MDH

- BEFORE MDH, IF NOT VISUAL...
- **CRAM** IN THE POWER (FULL THROTTLE)
- **CLIMB** – PITCH NOSE UP 5-10°
- **CLEAN** – WHEN POSITIVE RATE OF CLIMB, FLAPS UP
- **CALL** – “G-DI GOING AROUND”
- “G-DI ROGER”

## ON THE MISSED APPROACH

- ## 11
- “G-DI CONTACT EAST MIDLANDS APPROACH ON 134.180”
  - “134.180 G-RADI”
  - CHANGE TO APPROACH FREQ
  - “EAST MIDLANDS APPROACH G-RADI CLIMBING ALTITUDE 2500FT RADAR HEADING 270 DEGREES”
  - “G-DI EAST MIDLANDS APPROACH, CLIMB ALTITUDE 3000 FEET, TURN RIGHT HEADING 360 DEGREES”
  - “CLIMB ALTITUDE 3000 FEET, TURN RIGHT HEADING 360 DEGREES G-DI”
